

## About us

Consistently challenging the notion of what a secondary school can be, the Queensland Academy for Science, Mathematics and Technology (QASMT) is a new model in pedagogical practice and a paradigm shift in public education.

QASMT is a revolution in the teaching and learning of a science-based curriculum.

Students challenge teachers through lively debate and teachers lead them to new understandings through a broad, international curriculum.

Working at the forefront of scientific research, with cutting-edge facilities and research we are providing our students with the opportunity to excel.

Apart from the turbo-charged pedagogy, QASMT incorporates the latest IT infrastructure and architecturally designed learning spaces.

With a focus on the creation of a new interface between school and university, QASMT is the place to develop, challenge and inspire Queensland's best and brightest science, mathematics and technology students.
